

# Sr. Go Backend Engineer (m/f/d)

## About us.

As startup dedicated to public transport, our vision is to make buying tickets for passengers as easy as possible. Therefore, we develop a ticketing system that automatically detects beginning and end of a ride. Based on the detection, it is possible to provide passengers the cheapest ticket.

The problem we are trying to solve is challenging: developing a reliable ride detection algorithm based on data from smartphone sensors while creating a solution that attracts both passengers and public transport providers.

We believe that together we can build a great solution that will have a major impact on public transport.

## Responsibilities.

- contribute your own ideas to an innovative ticketing solution and shape the future of mobility
- design and implement Go microservices
- work on the ride detection algorithm – the core of our ticketing solution
- test and deploy microservices
- use functions and sensors provided by smartphones to improve our ride detection algorithm

## Requirements.

- excellent Go skills
- experience with CI/CD
- confidence in using Docker, Kafka und Kubernetes

## Benefits.

competitive pay

flexible working hours

monthly team events

fun environment

realization of own ideas

up-to-date tech stack

challenging tasks
